EAB

Skills-Based Grouping Toolkit

Redesign Small Group Instruction to Target Student Reading Needs

This Guide Will Help Users:

- Build consensus on why a skills-based grouping approach is critical for early readers
- Identify students' most critical skill development needs using appropriate diagnostics
- Plan and implement a skills-based grouping approach in early elementary grades

Executive Summary

Non-Specific Data Often Drives Student Grouping

The way students are grouped during reading small group instruction and intervention impacts their reading progress. However, most teachers do not group students in ways that will lead to significant reading improvement.

Teachers often design groups around non-specific reading levels and average benchmark scores using universal screeners or CBM[1] data. The box on the right provides examples of the most common grouping categories and screeners.

Although this data helps identify which students may need more intensive instructional support, it does not provide sufficient insight into the precise nature of students' skill deficits.

Many Teachers Group Students Using Imprecise Universal Screener Data

90% Of teachers **maintain generic reading groups**, without diagnosing the precise reasons behind students' reading levels

Examples of Non-Specific Grouping Categories

- *Red, Yellow, Green, Blue*
- *Advanced vs Struggling*
- *Above Benchmark vs Below Benchmark*
- *Level A, B, and C Groups*

Common Screeners or CBMs: AIMS Web, DIBELS, STAAR, Texas Primary Reading Inventory, DRA

Generic Student Grouping Often Masks Reading Needs

Designing small group instruction from generic universal screener data leads to several problems. First, non-specific measures mask critical details about why a student is at a particular reading level and what they need to learn to advance. Second, it hinders teachers from identifying appropriate interventions and resources to best address students' reading needs.

As a result, students who receive this "one-size-fits-all" intervention approach are less likely to achieve meaningful gains in their reading progress.

To maximize the effectiveness of small-group instruction, teachers need to use a different approach.

Relying on Non-Specific Data Can Have Unintended Consequences for Tier 2 students

50% Of tier 2 interventions teach concepts that students already mastered

22% Of students who develop serious reading difficulties go unidentified

14% Of tier 2 students progressed to the next-level benchmark category from the beginning to end of year

11% Decrease in mid-year reading scores for first grade students who received intensive interventions [2]

Executive Summary

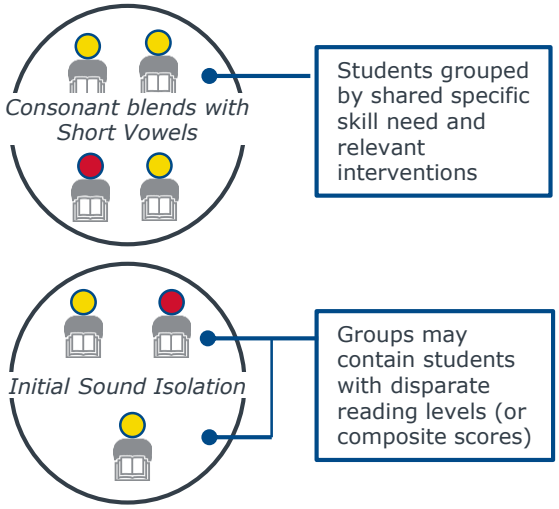
Skills-Based Grouping Improves the Effectiveness of Small Group Instruction

Districts that have achieved large-scale reading success not only aligned their tier one instruction with the science of reading, but they also deployed a **skills-based grouping** approach for small group instruction.

Rather than grouping students with similar generic reading levels, this approach groups students by specific skill deficits and targets instruction to address each skill.

Although students in skills-based groups may have different reading levels, they all share a specific instructional need. Skills-based grouping is an iterative process that requires frequent monitoring and regrouping.

Sample Kindergarten Skills-Based Intervention Groups



Five Steps For Implementing Skills-Based Grouping

This toolkit aims to guide and support educators who are knowledgeable in the science of reading in implementing skills-based grouping during early grade reading instruction. Below is an outline of the necessary steps to implement skills-based grouping. We have provided several corresponding implementation resources on the following pages.

Skills-Based Grouping Implementation Steps

1. **Employ Universal Screener**
   Who is struggling?
2. **Assess Needs Using Diagnostic**
   Why are they struggling?
3. **Organize Student Groups By Skills**
   Who has similar skill needs?
4. **Match Intervention to Need**
   How can I best teach this skill?
5. **Use Diagnostic to Assess Mastery**
   Have they mastered this skill?

For skills-based grouping to be effective, it is critical for teachers to align their instruction with the science of reading. To learn more about science-based reading instruction, please visit eab.com/ReadingResourceCenter or contact your dedicated advisor.

Skills-Based Grouping Audit

Capsule Description

In most cases, teachers are responsible for implementing skills-based grouping in their reading blocks, but they need appropriate resources and guidelines to be successful. **The audit on the next page is designed to help district and school leaders promote skills-based grouping during elementary reading blocks.** The audit outlines five steps for implementing skills-based grouping and describes the resources that teachers need.

Recommended Owner

- Chief Academic Officer
- Director of Curriculum and Instruction
- Principal

Implementation Steps

1. **Answer the questions on the following page** to determine how much opportunity your school systems has to build an effective skills-based grouping approach. Each "no" answer indicates room for improvement.

2. **For each "no" answer, explore ideas for how to improve.**

Skills-Based Grouping Audit

Question	Yes	No	If no:
Pre-Skills Based Grouping: Ensure your Teachers Know the Science of Reading			
1. Are all teachers aligning their reading instruction with the science of reading?			✓ Educate all reading instructors on the science behind how the brain learns to read and its implications for classroom practice. The success of skills-based grouping is contingent on this baseline teacher knowledge. ✓ To kickoff this effort, contact your dedicated advisor and visit EAB's reading resource center to learn about available resources and services on the science of reading.
Step 1: Employ a Universal Screener to Identify Overall Reading Ability			
2. Do teachers administer a universal screener (or CBM) to assess each student's average reading benchmark at least three times a year?			✓ Provide all reading teachers with universal screeners. These formative assessments allow teachers to identify and monitor students' reading progress. ✓ Require teachers to administer universal screeners at least three times a year to gather enough data points to observe trends in student progress.
3. Do teachers immediately track student universal screener data after administering a universal screener?			✓ Invest in a universal screener that has corresponding data-systems, when possible (most universal screeners or CBMs have these). In rare cases, instruct teachers to create a student data tracker, which includes student name, date that the student took the screener, and score in the sheet. ✓ Set a standard for teachers to update the data within 48 hours after administering the assessment. This allows teachers to quickly know who needs immediate attention and additional support.
Step 2: Use Diagnostic to Assess Students' Sub-Skill Needs			
4. Can teachers access diagnostics that measure at least 8 sub-skills within each foundational reading skill?			✓ Provide teachers with a set of diagnostics that can measure between 8 to 25 sub-skills for each foundational skill. ✓ Refer to the diagnostic selection guide on page 8 to explore various diagnostic options for your schools.

Skills-Based Grouping Audit (cont.)

Question	Yes	No	If no:
5. Can teachers discern between universal screeners and diagnostics?			✓ Educate teachers on the difference between universal screeners and diagnostics. While universal screeners provide insight on *who* is struggling and identifies their general skill need (i.e. phonemic awareness), diagnostics identifies *why* students are struggling (i.e. "first phoneme isolation").
6. Do teachers administer diagnostics after universal screeners to determine students' sub-skill reading deficits?			✓ Universal screeners often provide general skill category scores (i.e. a score for phonics). Ensure teachers use the following steps when administering diagnostics: 1. Identify students' general skill need looking for students' lowest category score on universal screeners. Select diagnostics that are most relevant to the students' general skill need. For example, if a student's lowest score is in phonemic awareness, teachers should use diagnostics that pertain to phonemic awareness. Most diagnostics have assessment sets that pertain to specific foundational skills. 2. Administer the diagnostics starting with simple skill assessments and advance students to more complex sub-skills if they demonstrate mastery. 3. Stop administering diagnostics once students score below 80% mastery on a given assessment. The skill measured in this diagnostic is the student's skill deficit.
Step 3: Organize Small Reading Groups by Skill Need			
7. After administering diagnostics, are teachers immediately tracking students' subskill needs in a data monitoring system?			✓ Instruct teachers to immediately log each students subskill need in a data-base within 48 hours of administering the diagnostic. This helps ensure that students receive timely and relevant small group reading instruction.
8. Are small reading groups designed around sub-skill needs, rather than reading levels or benchmarks scores?			✓ Require teachers to group students by specific reading skill deficits, rather than generic reading levels or benchmark scores. ✓ Remind teachers that students with different reading levels and benchmark scores can be in the same small group.

Skills-Based Grouping Audit (cont.)

Question	Yes	No	If no:
Step 4: Match Small Group Instruction to Skill Need			
9. During small group instruction, do teachers lead activities and lessons that target students' specific skill deficit?			✓ Develop and disseminate a "Skills-Based grouping support chart" to guide teachers in providing the right resources and instruction when working with small reading groups. See page 12 to learn more. ✓ Ensure teachers provide explicit instruction that directly targets students' skill deficits. ✓ Encourage teachers to use a variety of instructional activities and assignments that grow increasingly complex as students demonstrate progress.
Step 5: Use an Alternate Diagnostic to Assess Mastery			
10. Do teachers reassess students' mastery of the subskill every three weeks?			✓ Encourage teachers to monitor student's progress and skill mastery at least every three weeks so that students are not held in an intervention longer than needed. ✓ Allocate time to review student data during monthly PLCs at least every three weeks to promote data-driven instruction and allow teachers to troubleshoot data challenges.
11. Following small group instruction, are teachers using an alternate diagnostic to monitor student progress on a given skill?			✓ Most diagnostics contain alternate diagnostics that act as a post-test. These assessments measure the same sub-skill but contain different content. Use alternate diagnostics to assess skill mastery. ✓ Once students demonstrate 80% mastery on their original skill need, ensure teachers provide students more advanced diagnostics to determine their new skill need. Teachers should redesign groups accordingly.

Diagnostic Selection Guide

Capsule Description

Diagnostics are essential to skills-based grouping because they allow educators to know *why* students are struggling to read. Unlike universal screeners that identify who needs additional support and their broader skill deficits, diagnostics can measure between 8-25 different sub-skills that may hinder reading progress. Similar to how doctors require sufficient information to diagnose a patient, teachers need detailed information to identify the underlying causes of reading challenges for each student.

To implement skills-based grouping, it is imperative that district leaders invest in reading diagnostics to supplement universal screeners. **This resource is designed to help district leaders differentiate and select appropriate diagnostics.**

Recommended Owner

- Chief Academic Officer
- Director of Curriculum and Instruction
- Principal

Implementation Steps

1. **Refer to the sample list of early grade reading diagnostics on the next page.** This non-exhaustive list provides some examples of some of the available diagnostics to consider when selecting diagnostics.

2. **Use the reading diagnostic selection criteria when choosing diagnostics.** This set of key criteria will help you evaluate whether or not a given set of assessments can serve as diagnostics for skills-based grouping.

Sample Early Grade Diagnostic Resources

The key criteria that distinguishes diagnostics from other forms of assessments is listed below. We have also included a sample list of K-3 reading diagnostics that measure at least eight sub-skills within each foundational skill. Please note that this list is not exhaustive and does endorse a specific diagnostic. Rather, this is a starting list of diagnostic resources that may be worth further exploration.

Reading Diagnostic Selection Criteria

- The assessments test at least eight sub-skills within one foundational skill
- There are least two different assessment versions for each sub-skill so that teachers can use one of the versions for progress monitoring
- Each sub-skill assessment is no more than two pages in length

Diagnostic	Recommended User	Major Components Assessed				
		Phonemic awareness	Phonics	Fluency	Vocab	Comp.
DIBELS DEEP	District that are already using DIBELs or considering DIBELS assessments	X	X	X	X	X
AimsWEB PLUS	Districts that are already using Aims Web or considering Aims Web Assessments	X	X	X	X	X
95% Group	Districts that are interested in and able to invest in a scripted skills-based grouping program. The website also contains free, downloadable phonics diagnostics	X	X	X	X	X
(DAR) Diagnostic Assessment of Reading	Districts that want to supplement their existing universal screener assessments with skill-based diagnostics	X	X	X	X	X
(ERDA) Early Reading Diagnostic Assessment		X	X	X	X	X
(WRMT) Woodcock Reading Mastery Test

Skills-Based Grouping Support Chart

Capsule Description

It is critical that teachers provide students with resources and activities that best target reading skill deficits during small group instruction. District and school leaders should disseminate a prescriptive "skills-based grouping support chart," or grade-level guides that offers resource and activity suggestions for teachers to deploy during skills-based, small group instruction.

To develop these guides, district leaders should assign a team of lead teachers to customize the template on the following page using the resources available to each school.

Recommended Owner

- Superintendent
- Chief Academic Officer
- Director of Curriculum and Instruction
- Principal

Implementation Steps

1. **During the spring, establish a skills-based grouping leadership team who will be responsible for filling out the template on the following page for each grade.** Consider targeting grade-level teachers and literacy specialist who are knowledgeable of the science of reading to join the team.

2. **In late spring, identify time for the team to meet and complete the template.** Districts can use existing PLC or PD day for the assignment.

3. **Assign each grade-level team to complete the template on the following page.** Ensure each team member reviews the template ahead of time and takes an inventory of relevant instructional materials and lesson plans that could be included in the template.

4. **Give each teacher a copy of the chart that corresponds with the grade they teach.** Encourage teachers to reference this guide when designing and planning for small group reading instruction.

5. **Assign the skills-based grouping leadership team to update the template each year.** Updating the template at least once a year ensures its relevance.

- Source: EAB interviews and analysis.

Sample Skill-Based Instructional Chart

Below is an abbreviated sample of a skills-based grouping instructional chart containing resources and activity suggestions that are designed to promote learning a particular skill. Teachers take inventory of existing instructional materials, assessments, and instructional ideas to populate this chart. Each chart is customized to the school it serves.

Broader Skill Deficit	Diagnostic	Corresponding Resource
IF a student presents challenges with…	**THEN** administer the following diagnostic…	**SELECT** from the following resources or set of activities to target skill deficits…
Orthography: Letter Identification	**DIBELS Letter Identification**	✓ Handwriting without tears ✓ Interactive student word sorts
Fluency: Reading Pace	**Oral Fluency** using percentage of words read correctly	✓ Read Naturally ✓ One-on-one read aloud with teachers
Comprehension: Retell	Retell Fluency	✓ Visualizing and Verbalizing

Include "If/Then/Select" statements to clarify action steps

Offer available resource or activity suggestions for each skill

Cross-Classroom Initiative Planning Guide

Capsule Description

Most teachers have relative strengths and weaknesses when teaching reading. In most cases, the quality of small group instruction is contingent on whether students who have a given skill need are paired with a teacher who is particularly strong at teaching that skill.

Districts can maximize the quality of small group instruction by rolling out a cross-classroom intervention initiative. Rather than confining students to their regular teachers for small group instruction, students are paired with a teacher who is most effective at teaching their skill need. The tools on the following pages are designed to help school leaders promote and rollout cross-classroom small group instruction in their schools.

Recommended Owner

- Chief Academic Officer
- Director of Curriculum and Instruction
- Principals
- Grade-level lead teachers

Implementation Steps

1. **Review the description of the initiative on the next page to determine the appropriate timing for piloting the initiative**. Ensure teachers know the science of reading and skills-based grouping prior to piloting cross-classroom interventions. To help teachers gain this critical knowledge, refer to the previous tools in this toolkit and download our science of reading resources on the Reading Resource Center at EAB.com.

2. **Use the checklist and recommended timeframe to begin planning and implementing the initiative across schools**. Consider disseminating this resource to all leaders who will oversee the initiative.

- Source: EAB interviews and analysis.

©2018 EAB Global, Inc. • All Rights Reserved

Cross-Classroom Implementation Checklist

Description

Cross-classroom intervention is a skill-based grouping approach that pairs groups of students with a teacher who is best at teaching their particular skill need—regardless of whether or not the small group is led by their primary teacher. The implementation checklist and corresponding timeframe below are designed to help district and school leaders launch the initiative.

1 Spring Prior to Pilot Year

Establish Implementation Plan

- ❑ Are teachers familiar with the science of reading and aligning reading instruction accordingly?
- ❑ Area teachers familiar with skills-based grouping?
- ❑ Reconfigure existing 90-minute reading block schedule to reflect the recommended schedule on the next page.

2 Summer Prior to Pilot Year

Familiarize Teachers with Plan

- ❑ Host a mandatory teacher information session on the cross-classroom initiative and the new reading schedule.
- ❑ Assign teachers to skills by examining their student achievement data and soliciting teacher interest through surveys.
- ❑ Determine hallway transition protocols with teachers.
- ❑ Encourage teachers to plan small group lessons and activities for their assigned skills.

3 First Few Weeks of Pilot Year

Determine Student-Teacher Groups

- ❑ Teachers use diagnostics to determine student skill needs for all students.
- ❑ Teachers and school leaders assign initial teacher-student groups during dedicated PLC by examining student skill data.
- ❑ Teachers explain the initiative and hallways protocols to students.
- ❑ Students practice hallway transition protocols.

4 Throughout Pilot Year

Monitor Student Progress and Regroup

- ❑ Teachers reassess students and reorganize group assignments every three weeks.
- ❑ Teachers continue to plan and refine their small group instruction around specific skills.
- ❑ Consider assigning multiple teachers to different skill needs to promote small group ratios, when possible.

©2018 EAB Global, Inc. • All Rights Reserved

Sample Reading Block Schedule

To implement this initiative, school leaders should reconfigure existing 90 minute reading blocks into three distinct reading activities. When reconfiguring reading blocks, refer to the recommended time allocation and sample reading block schedule below.

Reading Block Time Allocation

- **20 minutes of whole-group instruction**
- **40 minutes of reading centers that do not include guided reading**
- [5 minutes of hallway transitions]
- **20 minutes of small group reading instruction, either inside or outside of students' homeroom classroom**
- [5 minutes of hallway transitions]

Sample Reading Block Schedule	Components
9:00 a.m. Whole group instruction	✓ Teachers provide explicit reading instruction– including modeling reading skills– to the entire class.
9:20 a.m. Reading centers	✓ Students break into small groups and rotate across four reading centers, spending ten minutes in each center. ✓ These centers **do not** include guided reading. Each center includes interactive activities that reinforce a foundational skill (i.e. phonics, vocabulary, and writing).
10:00 a.m. Hallway transitions	✓ Students transition to their assigned teachers for small group reading instruction, based on their reading skill deficits. ✓ Most students will transition to a different classroom. ✓ At least one adult monitors the hallway to ensure smooth student transitions.
10:05 a.m. Small group reading instruction	✓ Teachers provide explicit small group instruction that target student skill needs ✓ Teachers take note of opportunities to refine instruction when observing students practicing these skills.
10:25 a.m. Transition to homeroom	✓ Students return to their classrooms.
